2015 - 2017

PROJECTS

Gmoney trans, South Korea

Gmoney provides a global remittance solution. Working as a .NET developer for Gmoney as inficare provides outsourcing facilities. Building restful api for features. Integrating third party api to the system. Maintaining the code and finding bugs while maintaining the industry standard architecture.

E-commerce web application

Worked as full stack developer for zero logic space using .NET as backend framework and reactJs as frontend. Key responsibility was to build restful apis in backend and implement that in front end as well.
Developing and maintaining a dashboard for admin users. Building and implementing features as required by the client.

Ielts mock test application

In this application, I built restful apis for the overall application and built a dashboard for content management and to provide scores, admin could upload questions and manage them. Admin could manage users. Backend was built using .NET framework and frontend was built using angular. Restful api that I built were then consumed by mobile application and all the tests were done through mobile apps and answers were uploaded and seen in the dashboard and given marks accordingly.
